

01 | CIVIC THESIS + THE FIRST 100M

JING-ZHANG CIVIC AI LOOP

A CIVIC PROVING GROUND FOR URBAN AI

ONE LINE · THREE STATIONS · ONE RECEIPT

First deliver a civic proof space anyone can traverse, stop, appeal and replay—then discuss eleven kilometres.

v2.7 VISUAL EVIDENCE RECOVERY | content baseline: verified v2.4

CONCEPT DESIGN · PROVISIONAL GEOMETRY · NOT A LEGAL BOUNDARY · UNVERIFIED PERFORMANCE REMAINS UNKNOWN

JING-ZHANG CIVIC AI LOOP

EXECUTIVE SUMMARY

The First 100m is the only launch action; three stations and the full corridor must earn scale through independent replay.

01

SPATIAL THESIS

Railway station, line, timetable and handover become entry, takeover, appeal and exit for urban AI.

02

LAUNCH BOUNDARY

Only one accessible public task chain P1; P2 and P3 do not compete for launch resources.

03

FAILURE STRATEGY

If the ordinary path, staffed desk or appeal point fails, the run fails.

04

SCALE VERDICT

Independent review returns expand, repair or exit; a demo is not deployment permission.

JING-ZHANG CIVIC AI LOOP

THE FIRST 100M CIVIC PROOF SEGMENT

A design name for the first continuous proof unit—not an unverified measurement.

ENTRY

SAFE BAY

HANDOFF

APPEAL

REPLAY

SPATIAL ACCEPTANCE LOGIC

Choose → assist → handoff → challenge → replay. If any step fails, the run fails and does not scale.

v2.9 COUNTER-EVIDENCE GATE | BLOCKED_BEFORE_G2 | 0/6 PASS - 6/6 BLOCK

Provisional boundary | zero-feature constraints | operator and data governance pending | no field baseline | P1-P3 not executed.
Desktop replay is not field authorisation. Clear every block before human G2 review.

02 | SPATIAL FRAMEWORK + THREE ZONES/TWO WINGS

JING-ZHANG CIVIC AI LOOP

THREE-SCALE WORKING FRAMEWORK

First 100m → three stations → full corridor: each scale has prerequisites and explicit unknowns.

ONE LINE · THREE STATIONS · ONE RECEIPT

04 / 14

JING-ZHANG CIVIC AI LOOP

SPATIAL + LAND-USE STRUCTURE

Prioritise existing ground floors, railway nodes, under-bridge and leftover spaces—not demolition-led expansion.

06 / 14

JING-ZHANG CIVIC AI LOOP

ROLES OF THREE ZONES + TWO WINGS

Not five park labels, but an evidence relay: verify, translate, experience, service and test.

01

ZHONGZHIYUAN

Joint stack verification; asks whether it can work safely.

02

AI ORIGIN

Open translation and civic co-test; asks whether people can use and challenge it.

03

DAZHONGSI

Daily consumption and public experience; asks whether rights hold.

04

TWO WINGS

Professional services + bounded field scenes, without inventing partner commitments.

08 / 14

JING-ZHANG CIVIC AI LOOP

WALKABILITY, BLUE-GREEN + REVERSIBLE TECH

After technology is removed, walking, rest, lighting, staffed service and railway narrative still work.

01

ORDINARY ROUTE

Equally visible and always available.

02

CROSS LINKS

Link neighbourhoods to the civic spine; avoid a tech island.

03

BLUE-GREEN BUFFER

Serve everyday comfort and safety before experiments.

04

ROBOT BOUNDARY

Controlled testing only; limited zone, time and human takeover.

07 / 14

03 | GATES, METRICS + ACCOUNTABILITY

JING-ZHANG CIVIC AI LOOP

P1 PROTOCOL + GATES

Replace data, walk the site, establish non-AI baseline, staff service and rehearse synthetically before civic tasks.

JING-ZHANG CIVIC AI LOOP

METRICS: UNKNOWN IS A RESULT

Do not convert unmeasured into passed, hide the worst group with averages, or call a demo field performance.

JING-ZHANG CIVIC AI LOOP

RUN RECEIPT + ACCOUNTABILITY

Each run leaves minimal replayable, accountable and expiring evidence—without unnecessary identity.

JING-ZHANG CIVIC AI LOOP

RISKS, STOP LINES + VERDICT

The Loop is not about adopting AI faster; it gives the city spatial and institutional capacity to reject unfit AI.
